

See what your records prove, and what they don't.

Recall rehearsal for small food makers. Follow ingredient lots through production to customer shipments, with incomplete evidence in plain sight.

THE MOMENT

A supplier flags smoked paprika lot PAP-2409. The sauce maker has cooked a base, filled several runs, and shipped some jars. One spice entry is missing. Batchlight shows what the records support and what still needs investigation.

480

Recorded connection
300 shipped, 180 on hand

120

Needs investigation
Incomplete input record

240

No recorded connection
This does not mean safe

Synthetic Ember & Oak demo. Counts are finished jars. Bulk intermediate material is separate.

WHY IT WORKS

Missing inputs carry uncertainty into downstream batches. Recovered source-lot evidence changes the live scope while an earlier rehearsal keeps its original basis. The public demo runs on the device. The full self-hosted app adds private accounts and validated offline synchronization.

A BUSINESS HYPOTHESIS

Start with independent sauce makers supplying retail or wholesale customers. Test a \$29/month hosted plan after five observed rehearsals with producers. Free local rehearsal is the entry point. No customers, revenue, or validated demand are claimed.
